

Maksym Depa

Python Backend Engineer

Email: md.maxdepa@gmail.com | GitHub: lominka-c | LinkedIn: lominka | Telegram: @lominka_n4u

Summary

Final-year Software Engineering student focused on Python backend development and RESTful APIs. Hands-on experience developing asynchronous Telegram bots, integrating Web3/blockchain APIs, and deploying cloud web services.

Experience

Freelance / Self-Employed Software Developer | Remote (Feb 2023 - Present)

- Backend & Bot Development: Engineered custom asynchronous Telegram bots using Python (aiogram / asyncio), automating workflows, data pipelines, and notifications for end-users.
- Web3 & API Integrations: Developed automated scripts to interface with Web3 / blockchain endpoints, querying real-time on-chain data and handling crypto transaction tracking.
- Cloud Deployment & Reliability: Deployed RESTful API services to cloud hosting platforms (Render), configuring environment pipelines and monitoring uptime (UptimeRobot) to maintain service availability.
- Internal Tools & Utility Development: Built private automated utilities and administrative interfaces for remote service interaction, handling data parsing, validation, and structured request processing.

Achievements

- Independently built, configured, and deployed database-driven Python backend services and Telegram bots to production environments.
- Configured continuous monitoring and automated health checks for deployed cloud endpoints.
- Successfully integrated hardware systems and cross-platform mobile clients with custom Python backend architectures.
- Maintained a consistent practical focus throughout 4 years of Software Engineering coursework.

Skills

Programming Languages: Python (Asyncio, OOP, Data structures), SQL, C++ (Foundational OOP & Memory Basics), Dart (Basic)

Backend & Frameworks: RESTful APIs, FastAPI, Flask, aiogram

Databases: PostgreSQL, SQLite

Web3 / Integrations: Crypto APIs, Third-Party REST APIs, JSON parsing

DevOps & Cloud: Git & GitHub, Render Cloud Platform, UptimeRobot, Linux CLI, Bash basics

Hardware & IoT (Bonus): ESP32-C3, Microcontroller programming (C++/Arduino), LoRa RF, I2C/SPI protocols

Education

Technical Professional College of Lviv Polytechnic National University (2023 — 2027 (Expected))

Software Engineering program with focus on backend systems, distributed architecture, and practical engineering projects.

Languages

Ukrainian - Native

English - Technical reading and written communication with translator tools
